ABSTRACT

Education for Survival is a program of Safety Education for children in grades four, five, and six. The objectives of the program are to: 1) develop a deeper understanding of the privileges and responsibilities individuals have as pedestrians, bicyclists, and school bus passengers; 2) appreciate the rights of others and become increasingly considerate of and responsible for personal safety and the safety of others, 3) have sufficient knowledge of school safety to be able to work with others in promoting a safe school environment; 4) behave in ways that reflect both a broad understanding of outdoor safety and a desire to maintain a safe and healthful outdoor environment; and 5) possess the attitudes, knowledge, and skills necessary to react quickly and efficiently in common emergency situations. The manual is set up in four column form: (1) references, (2) major understandings and fundamental concepts, (3) suggested teaching aids and learning activities, and (4) supplementary information for teachers. (KJ)

THE CURRICULUM DEVELOPMENT CENTER/ALBANY, NEW YORK 12224

STRAND V
EDUCATION FOR SURVIVAL

Safety Education

GRADES 4, 5, 6

OVERVIEW

Safety instruction in the primary grades provides a framework upon which later, more complex understandings and behaviors can be developed.

Using this foundation as a point of departure, the intermediate grade teachers will be involved in safety education that requires pupils to assume increasing responsibility for his own safety.

Most intermediate grade children have developed to the point where they can be involved in projects encouraging more pupil independence. Furthermore, many of their efforts can make definite contributions to school, home, and community safety.

STRAND V

EDUCATION FOR SURVIVAL

Safety Education

GRADES 4, 5, 6

OBJECTIVES

Pupils in grades 4, 5, and 6 should:

- develop a deeper understanding of their privileges and responsibilities as pedestrians, bicyclists, and school bus passengers.
- appreciate the rights of others and become increasingly considerate of and responsible for the safety of themselves and others.
- have sufficient knowledge of school safety to be able to work with others in promoting a safe school environment.
- behave in ways that reflect both a broad understanding of outdoor safety, and a desire to maintain a safe and healthful outdoor environment.
- possess the attitudes, knowledge, and skills necessary to react quickly and efficiently in common emergency situations.

REFERENCE	MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS	SUGGESTED TEACHING AIDS AND LEARNING ACITVITIES	SUPPLEMENTARY INFORMATION FOR TEACHERS
I. Traffic Safety	The frequency of traffic accidents can be reduced by knowledge and application.		
A. Traffic signs	A knowledge of the meaning of different types of traffic signs is essential in preventing accidents.	Have the pupils make a variety of traffic signs.	<p>The color and shapes of signs give information and directions. In New York State, one sees such typical signs as:</p> <ul style="list-style-type: none"> ● STOP - a red octagon (The yellow signs are being replaced by red because red denotes danger.) ● DANGER - diamond shape, usually yellow ● YIELD - usually yellow and black ● Speed limit signs are black and white - rectangular ● Interstate roads have a shield. The old system was black and white, the new system is red, white, and blue.
B. Seat belts	Lives can be saved by using seat belts.	Film: "Safety belt for Susie", State Health Department Film Library.	
C. Identifying accident causes	A knowledge of specific causes of accidents and their prevention helps to reduce the number of accidents.	Using a map of the district indicate locations of frequent accidents, and the type of accidents involved.	The state highways are now marked to feed information into a computer to ascertain accident locations. This sign is green with white numbers.

REFERENCE	MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS	SUGGESTED TEACHING AIDS AND LEARNING ACITVITIES	SUPPLEMENTARY INFORMATION FOR TEACHERS
D. Pedestrian accidents	Violation of safety rules by pedestrians may result in their involvement in accidents.	<p>Class discussion: What are some causes of pedestrian accidents?</p> <p>How can these be reduced or eliminated?</p> <p>Have pupils give skits on pedestrian safety.</p> <p>Demonstrate if possible:</p>	<p>Accident rates go up when there is traffic congestion - more cars on the roadway + more speed = more accidents.</p> <p>Darkness triples the hazards because of poor visibility.</p> <p>Better street lighting reduces accidents.</p> <p>Laboratory tests on drivers involved in fatal accidents have shown high levels of alcohol in their systems in many instances, thus showing that excessive drinking of alcohol before driving is dangerous.</p> <p>When traffic laws are enforced, accidents can be reduced.</p> <p>Pedestrian accidents may occur when people violate safety principles by:</p> <ul style="list-style-type: none"> • jaywalking • hitching on vehicles • playing in the streets • walking into the street from between parked cars • crossing between intersection sections

REFERENCE	MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS	SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES	SUPPLEMENTARY INFORMATION FOR TEACHERS
E. Safety patrol	Safety patrols help reduce accidents.	<ul style="list-style-type: none"> • crossing at intersection • crossing between intersection sections <p>Use posters showing the school safety patrol in action. (Obtain from the local American Automobile Association office.)</p> <p>Have the class members write a short paper on a selected topic concerning traffic safety.</p> <p>Film: "Your school safety patrol", American Automobile Association.</p>	<ul style="list-style-type: none"> • crossing against traffic signal <p>Patrol members learn traffic safety by direct participation in the patrol.</p> <p>Information on setting up a safety patrol may be obtained from American Automobile Association.</p>
F. Bicycle	Safe use of bicycles is important.	<p>Films: "The bicyclist", "Once upon a bicycle", "I'm no fool with a bicycle", "Bicycle rules of the road", State Health Department Film Library.</p> <p>Use a sample test, such as one from Aetna Insurance Company, Hartford, Connecticut. (Bicycle safety quiz)</p> <p>Organize a bicycle safety patrol.</p> <p>Arrange for a bicycle inspection and test day.</p>	

REFERENCE	MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS	SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES	SUPPLEMENTARY INFORMATION FOR TEACHERS
G. Traffic regulations	Traffic rules are designed to make driving safer.	<p>Review and study traffic regulations.</p> <p>Compare traffic laws of the early 1900's with the present.</p> <p>Have pupils translate traffic regulations into simpler language for general distribution to other classes.</p> <p>Visit a traffic control center.</p>	
II. School Bus Safety	The school bus driver has a very responsible position and depends on the cooperation of his passengers.	<p>Study your local school's requirements for the selection, education, and placement of school bus drivers.</p> <p>Have pupils make posters on any aspect of bus safety.</p> <p>Build model of bus and tag safety rules on parts of the model.</p> <p>Discuss the three aspects of school bus safety:</p> <ul style="list-style-type: none"> • the driver • the equipment • the passenger 	<p>New York State has passed a law that school bus drivers cannot be over 65 years of age.</p> <p>The trend for school bus drivers is to have young people drive school buses.</p>

REFERENCE	MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS	SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES	SUPPLEMENTARY INFORMATION FOR TEACHERS
A. Basic rules for bus riders	Accidents can be eliminated with cooperation and knowledge.	Discuss your school rules for bus riders. Why are these important?	<p>Safety precautions:</p> <p>If there are overhead racks, make sure parcels are placed in such a position so they do not fall if the bus stops suddenly.</p> <p>While riding the bus:</p> <ul style="list-style-type: none"> • Place lunch baskets, musical instruments, large parcels under the seat. • Never place anything in the aisle where others may trip over it. • Stay seated until the bus stops. • Do not tamper with emergency equipment or windows. • It is best not to eat in the bus. • While getting off the bus-if you pass in front of the bus, make sure the driver signals that it is safe and then be at least 10 feet in front of the vehicle. If you walk along the side of the bus, remember it is dangerous if slippery. Get to the side of the road as quickly as possible and don't loiter.

REFERENCE	MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS	SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES	SUPPLEMENTARY INFORMATION FOR TEACHERS
B. Safety regulations for school buses		<p>Have the class study the state and local traffic regulations for school buses.</p> <p>The children may enjoy making a booklet of traffic regulations.</p> <p>Have pupils help explain rules of safety to younger grades.</p>	<p>Signals: Every school bus shall be equipped with two flashing red lights in front and in the rear.</p> <p>Signs: Every school bus shall carry in the front and rear, signs--SCHOOL BUS-- in letters not less than 8 inches in height.</p> <p>Stopping: Buses shall come to a full stop at railroad grades crossings.</p> <p>Overtaking and Passing: The driver of a vehicle shall come to a full stop when a school bus is taking on or discharging passengers, and should not proceed until the bus has moved ahead.</p>
C. School bus patrol	The bus patrol can assist the driver in following safety precautions.	<p>Discuss the duties of the bus patrol.</p> <p>Film: "School bus patrol", American Automobile Association.</p>	<p>Some suggested duties of the bus patrol:</p> <ul style="list-style-type: none"> ● Assist younger children load and unload. ● Make sure all parcels are safely stored. ● Aiding pupils to use emergency door when required. ● Follow instructions of the driver in emergencies.

REFERENCE

MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS

SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES

SUPPLEMENTARY INFORMATION FOR TEACHERS

III. Water Safety

A. Swimming

Swimming is a recreational,
as well as a life-saving,
activity.

Have pupils list ten qual-
ifications for a safe
swimming area.

Suggested questions for
class discussion:

Why swim with a buddy?

Why dive only in known
water?

Why shouldn't we swim in
unsupervised areas?

Bulletin board - use pic-
tures, clippings, and use
as a discussion those
items used.

Films: "Be water wise
swimming", "I'm no fool
in water", "Water rescue",
State Health Department
Film Library.

Film: "Ice rescue",
American Red Cross.

- Making sure all are
aboard when leaving
the school bussing
area.

Outdoor swimming classes
in summer could be conduc-
ted by the American Red
Cross or by qualified
school personnel.

In New York State there was
a 92% increase in the num-
ber of school pools in the
1955-1965 period.

Two out of every three
people in the United States
do not know how to swim
well enough to swim 50
feet and close to 7,000
people drown each year in
the United States. The age
group 5-14 leads the list
of drowning fatalities.

Refer to booklet:

"Aquatics K-12"

The University of State of
New York

State Education Department
Curriculum Development
Center

1966. Review Chapters 3 & 4.

REFERENCE

MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS

SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES

Use American Red Cross posters and water safety guide for discussion.

Suggested discussion questions:

- Why isn't it good to swim alone?
- Why shouldn't a person dive in unknown water?
- How can a swimmer rest while swimming?
- What danger might one face if one swims in very cold water?
- Why is it not good procedure to call for help when it is not needed?

For advanced classes, demonstrate or describe rescue breathing technique (mouth to mouth) or use

SUPPLEMENTARY INFORMATION FOR TEACHERS

Boys are more adventurous and are, therefore, more prone to drowning accidents.

Safety precautions:

- A swimmer should not swim alone. He might be unnoticed and drown.
- In unknown water, a rock, submerged piling, and other objects could cause injuries.
- A swimmer might float, tread water or vary his style of swimming such as using sidestroke, breaststroke or "tired swimmers crawl" if he becomes tired.
- Cold water exhausts a swimmer more quickly than warm water.
- Do not feign danger. A person may need help and people will think he is playing.

REFERENCE

MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS

B. Boating

The United States Coast Guard sets rules and regulations for boating.

SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES

the film: "Rescue breathing" or "Breath of life".

Have pupils discuss the features of small craft: row boats, canoes, kayaks, inflated boats, and their uses.

Film: "Boating safety", State Health Department Film Library.

SUPPLEMENTARY INFORMATION FOR TEACHERS

Approximately 1,500 drownings were listed among small boat accidents last year. Life jackets must be available for all passengers. Federal Boating Act, 1958 - "All boats of 10 H.P. or greater must be numbered and licensed." New York has passed legislation that all boats, including row boats, must be equipped with life jackets or pillows that are buoyant.

Invite a speaker from a local boating club or organization to discuss boating safety.

New York State has a boating course conducted under the Conservation Department. Regulations such as -- any cushions used must be buoyant and bear United States Coast Guard approved label -- should be stressed.

Discussion of boating safety:

- What are the legal requirements for boat operators ages 10-14?
- Why do boats have required signals?

The teacher should stress items such as these:

REFERENCE

MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS

Overloading, horseplay,
and improper movement of
passengers is hazardous.

SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES

- What are some Coast
Guard rules for safe
boating?

SUPPLEMENTARY INFORMATION FOR TEACHERS

- Fueling - never refuel
with the motor running
or when it is hot.
- Overloading - is dan-
gerous. The safe capa-
city specified should
not be exceeded.
- Movement of passengers
should be done with
caution.
- In case of trouble -
sudden storm, etc., do
not leave the boat.
Even a capsized boat
will remain afloat.
- Fuel vapors are ex-
plosive.

Discussion topics:

- registration of boats
- rescue
- life belt, life pre-
servers
- life jackets

Field trip to a marina.

C. Water skiing

Water skiing can be safe.

Have class discuss: How
can water skiing be made
safe?

One out of every five boats
purchased today is for
water skiing purposes.

Make posters of water ski-
ers. Include safety cap-
tions.

Water skiing is a fast
growing recreational sport.

REFERENCE

MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS

SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES

Discuss the safe skiing rules with the class.

SUPPLEMENTARY INFORMATION FOR TEACHERS

New York State requires two persons in a boat for water skiing. One is the operator and the other is the observer.

Most of the accidents in water skiing can be avoided. They may be caused by striking a fixed object such as a dock; being hit by the towing boat; striking floating debris; or becoming entangled in the tow line.

Rules for safe water skiing;

- Wear a flotation device for your own protection--jackets are better than belts.

- Avoid excessive speed and stay away from bathers and fishing boats.

- Learn and use the proper hand signals.

- Watch for hazards; do not depend on the driver.

- If one falls, recover the skis before they float away.

- If the skier falls, the driver should reduce his

Water skiers must follow certain rules to be courteous and safe.

REFERENCE	MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS	SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES	SUPPLEMENTARY INFORMATION FOR TEACHERS
			<p>speed and return to the skier. Stop the motor when taking the skier into a boat.</p> <ul style="list-style-type: none"> ● Remember, a tired skier is prone to accidents. Don't ski when tired. ● Adequate protection from sun and wind burn for the skier is a must.
IV. Fire Safety	<p>Fire hazards can be significantly reduced if people are informed and are willing to follow simple safety precautions.</p>	<p>Have a committee assigned to report on fires in the community.</p>	<p>Ignition of flammable liquids, smoking accidents, improper use of matches cause many home fire deaths.</p> <p>Each student should understand the dangers of fire.</p> <p>It is reported that 25% of home fires are caused by improper use of matches.</p> <p>Some suggestions for safe use of matches:</p> <ul style="list-style-type: none"> ● Never carry matches loose in the clothing pockets. ● Close the cover before striking a match. ● Watch sparks from matches; be sure they are out.
A. Matches	<p>To avoid fires caused by carelessly used matches, one should follow rules for the safe use of matches.</p>	<p>Discuss safety precautions in the use of matches.</p>	

REFERENCE	MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS	SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES	SUPPLEMENTARY INFORMATION FOR TEACHERS
B. Volatile liquids	Vapors from volatile liquids are explosive.	<p>Make a list of flammable liquids used around the house: ether, benzine, naphtha, anti-freeze, gasoline, kerosene, insecticide sprays, lighter fluid, carbon tetrachloride, etc.</p> <p>Demonstrate in a science laboratory how air helps fire burn, and how water can be used to extinguish some fires.</p>	<ul style="list-style-type: none"> • Keep matches and lights out of the reach of children. • Do not discard burned matches in dry grass or other flammable areas. • Never use matches in closets or attics; use a flashlight instead. • Keep matches in a proper container. • Make sure the match is completely out before discarding it. <p>Gasoline is very explosive in vapor form and gives off flammable vapors even when the temperature is below freezing. Explosions have occurred when gasoline vapors reach a pilot light or spark from an electric motor or compressor even at a distance.</p> <p>The New York State Law does not allow a gas station attendant to fill a glass container with gasoline. Only non-breakable containers can be used for this purpose. They should be red and labeled "gasoline".</p>
C. Flammable clothing	Flammable clothing is dangerous to wear.	Demonstrate how various cloth materials burn.	Over 50% of all fire deaths are related to ignition of clothing. In addition,

REFERENCE

MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS

D. Community efforts
in fire protec-
tion

Telephoning is an impor-
tant way to summon emer-
gency aid if a fire oc-
curs.

Fire fighting methods
and equipment have im-
proved steadily.

SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES

Role play an emergency
fire situation with tele-
phone installed for class-
room use.

Have the pupils make a
historical study of fire
protection in their com-
munity.

Conduct a field trip to
the fire station or have
the local fire department
send a speaker to the
school.

Have pupils make a chart
listing the beneficial
uses of fire.

Discuss how present-day
lighting has become more
safe in comparison to pre-
vious years when whale
oil lamps, candles, kero-
sene lamps, gas lighting
were used in the home.
Discuss early electric
lights.

SUPPLEMENTARY INFORMATION FOR TEACHERS

150,000 injuries occur
yearly.

Stress the importance of
relinquishing a telephone
on a party line to any
person attempting to place
an emergency call.

Fire Prevention Week in
October (the anniversary
of the Great Chicago Fire-
October 9) can be used to
implement fire safety edu-
cation.

Fire fighting equipment -
fog nozzles, foam and other
extinguishers - are cur-
rently used.

Stress fire prevention
education:

- Decorations for parties
should be fire resis-
tant.
- Sufficient fire ex-
tinguishers of the prop-
er type should be avail-
able.

Explain:

Type A - for wood, paper
fires (water)

Type B - for oil, grease
fires (foam)

REFERENCE	MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS	SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES	SUPPLEMENTARY INFORMATION FOR TEACHERS
-----------	---	---	--

Type C - for electric fires (carbon dioxide)

E. Man-made causes of fires

Carelessness is the indirect cause of most fires.

Have the class list causes of recent fires. Make a scrapbook of fires showing the different areas where fires may occur: home, school, industry, and farm.

Film: "Help prevent fires", National Fire Protective Association.

Ignorance of the causes of fires may lead to an accident.

Develop a special project during Fire Prevention Week.

It is estimated that 25% of all fires are caused by children playing with matches. Careless smokers are another cause of fires.

Electrical fires may be caused by poor insulation, overloading of circuits, defective wiring, poor switches, improper use of plugs and extension cords.

Periodic checking of storage spaces may reveal hazards that are causes of fires.

Fire safety checklists are available from National Board of Fire Underwriters and many insurance companies. Have pupils and parents complete the checklist and discuss the results with the class.

Common flammable liquids besides gasoline which give off flammable vapors are ether, benzene, naphtha, some anti-freeze solutions, charcoal lighter fluids, and cigarette lighter fluid.

REFERENCE

MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS

SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES

Observe the behavior and conduct of the pupils during subsequent fire drills to see if there is improvement in promptness, order, and other safety measures.

Use a script for a dramatic play to illustrate what to do if clothes catch fire, how to report a fire, how to build a fire.

Make a flannelgraph illustrating the fire triangle: air, fuel, ignition.

Prepare a bulletin board display using articles that describe fires that occurred in your local area.

Have a group of children prepare a chart of various benefits derived from fire, using pictures from magazines and other sources.

SUPPLEMENTARY INFORMATION FOR TEACHERS

Keep these fluids in metal containers and store as little as possible. It is the vapors that cause the explosions.

Spontaneous ignition - many home fires start in the basement. Stacks of damp newspapers can cause spontaneous ignition as well as other improperly stored materials, such as celluloid, plastic materials, and other synthetics made of pyroxylin, furniture polish and/or old cleaning polish rags, etc.

Rubbish such as cardboard boxes, excelsior, packing cases, and trash should be kept to a minimum in the basement, garage, and attic.

Lightning poses a special threat to the farm-dweller and the farm community. Forest fires are frequently started by lightning.

Farm buildings should be protected by lightning rods that are properly grounded. Discuss how they work.

REFERENCE	MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS	SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES	SUPPLEMENTARY INFORMATION FOR TEACHERS
	The use of unsafe or improperly supervised heating devices in the home may cause fires.		Many home fires result from chimney defects, furnaces, and stoves with defective flues.
			Many fires are also related to ignition of flammable fabrics, space heaters, portable heaters, etc.
F. Proper procedures to follow in case of fire	Inhalation of smoke and other by-products of combustion can be fatal.	Have the pupils study news clippings where people have been overcome and died upstairs when the fire occurred downstairs. Discussion: Why do firemen use oxygen masks? Why does heat rise?	Most fatalities occur upstairs when a fire stays downstairs. Superheated gases replace oxygen in the body and cause death.
1. The fire drill	Drills should be well planned, efficiently taught, and well supervised.	Make a chart for a fire drill in your school and mark exits in red. Discuss the importance of the school fire drill. Conduct a fire drill with the principal and staff.	Fire Law #807, New York State Education Law "Fire Drills" states that twelve fire drills must be held in every school, public or private, with more than 100 pupils (cities of 125,000 or over are exempt). Eight of these drills must be held before December 1. Blocked exit drills are suggested. Each school must be inspected annually before December 15th and a copy of the report sent to the State Education Department.

REFERENCE

MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS

SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES

SUPPLEMENTARY INFORMATION FOR TEACHERS

Have the class survey the fire extinguishers in the building to determine type, date of inspection, and proper use of the specific type.

Consult your teachers' handbook for local fire regulations.

Fire drills are held for the safety of all.

Discussion:

- Why must everyone evacuate the building in a fire drill?
 - Why is the "no talking" rule enforced?
 - What is the best way to evacuate this classroom? Where can we go if that exit is blocked?
 - Do you think fire drills can be improved? How?
 - What regulations and laws of the New York State Education Department should be known?
 - Should fire drills be conducted at home? Why?
- The fire alarm should be readily distinguishable from other types of alarms. Each classroom must have two means of egress, either two doors or one door and a window with an opening 2' x 3' leading to the outside of the building.
- Fire safety should be habitual and taught as part of daily living. Fire safety can be integrated with other subject areas: art, health education, social studies, English, and mathematics, but especially in science.

Teachers are responsible for all pupils. The teacher should stand at an exit, room door, etc. and check the roll and report missing students immediately to the principal. Everyone should participate in drills. Have a system of caring for disabled children.

REFERENCE

MAJOR UNDERSTANDINGS AND
FUNDAMENTAL CONCEPTS

2. Plans for
each specific
area of the
school

SUGGESTED TEACHING AIDS
AND LEARNING ACTIVITIES

Ask children to survey
the school for fire haz-
ards.

SUPPLEMENTARY INFORMATION
FOR TEACHERS

Special plans must be
worked out for evacuation
of pool, gymnasium, of-
fices.

All school personnel
should know how to report
a fire.

Alternate shelter should
be available in case of
fire, in buses, churches,
houses, etc.

- G. False fire alarms
- False fire alarms endan-
ger lives and property.

Have a fireman or fire
chief talk to the class
on the subject of "False
Fire Alarms".

Check newspapers for
false alarm reports.

Fire officials report that
it costs over \$100 to make
the run to a false alarm
and it also puts the fire-
men in unnecessary danger
from traffic accidents,
etc.

Property and lives have
been lost because the fire
company was out at a false
alarm.

- V. Home Safety

Constant research is done
to make a home as acci-
dent-proof as possible.

Discuss accidents in the
home.

The class could make
graphs of home accidents
according to type, loca-
tion, and frequency.

Build a model of a home
and label hazard areas.

In 1967, 30,000 people died
in reported home accidents.
The principal cause of
accidents in the home are
falls, fires, poisons,
electricity, suffocation,
firearms, poison gases.

REFERENCE	MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS	SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES	SUPPLEMENTARY INFORMATION FOR TEACHERS
A. Falls	All accidental injuries are preventable.	Bulletin boards and posters on falls, poisons, fires, etc. Films: "Safe living at home", "How to have an accident in the home", State Health Department Film Library.	Falls account for around 50% of the home deaths due to accidents. The reasons for these accidents include such as items as: stairs poorly lighted or cluttered, wet floors or linoleum, spilled liquid not wiped up, highly polished floors, with non-rubber backed scatter rugs, icy walks and steps without hand rails. The use of safe step-ladders, instead of reaching, can eliminate some accidents. Safe climbing equipment should be provided for use by those youngsters who enjoy climbing.
B. Burns and scalds	Accidents involving burns and/or scalds are usually caused by carelessness.	Collect newspaper clippings about children who have been burned. Have the class suggest how the accident could have been prevented.	Burns and/or scalds in the home are usually caused by: <ul style="list-style-type: none"> • children playing with matches • improper use of flammable liquids such as gasoline • pots on burners with handles improperly placed

REFERENCE

MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS

SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES

SUPPLEMENTARY INFORMATION FOR TEACHERS

C. Poisoning

1. by gas

Because many gases are colorless, odorless, and tasteless, they are not detected and can kill.

Have pupils obtain newspaper clippings and tell about gas poisonings.

Carbon monoxide causes death because it unites with the hemoglobin in the blood thus displacing oxygen.

Common causes of carbon monoxide poisoning are:

- The pilot on the gas burner goes out.
- Improperly vented stoves or burners
- An inadequate refrigerant system
- An automobile is left running in an attached garage and the carbon monoxide enters the ventilation in the house.

2. by solids or liquids

Many common household substances can be harmful if directions for their use are not followed.

Class discussion: List the common household poisons and discuss first aid measures for each.

Using an opaque projector, project types of poison labels on the wall or screen. Discuss the importance of these labels.

About 1,800 persons die each year and 260,000 suffer disabling illnesses from poisoning in the United States. Around 1,500 deaths occur in the home.

Approximately 50% of those poisoned are under 20 years of age.

REFERENCE	MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS	SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES	SUPPLEMENTARY INFORMATION FOR TEACHERS
D. Electrical	Electricity can be helpful or harmful.	Have selected pupils give demonstration of safe use of electrical apparatus. Film: "Danger, high vol- tage", State Health De- partment Film Library. Have sample fuses on display.	Overdoses of the common medication aspirin, insec- ticides, and cosmetics are frequent causes of poi- soning. For first aid measures: see American Red Cross booklet. Fuses and circuit breakers protect against dangerous "shorts" and serious over- loading and can save ex- pensive appliances. When a fuse blows, this could be a warning that some- thing is wrong.
1. safety de- vices	There are devices by which the homeowner may protect against electrical hazards.	Have the class look up definitions of electrical terms: ampere, volt, watt, watt-hour, kilowatt hour. Perhaps this can be correlated to science instruction.	Five methods of safeguarding household electrical sys- tems: <ul style="list-style-type: none"> • screw-in fuses (15 to 30 amps) - generally 15 amps is used with No. 14 wire • non-tamperable fuses - threads differ in size to prevent replacement by improper size. • cartridge fuses - used for main lines and for special heavy duty cir- cuits.

REFERENCE

MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS

SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES

SUPPLEMENTARY INFORMATION FOR TEACHERS

- time-delay fuses will not blow during temporary overload, yet will guard against a sustained overload.
- circuit breakers - look like small switches; they automatically switch off when overloads or "shorts" occur.

2. signs of trouble

A knowledge of the types of problems associated with electricity is important to diagnose the source of difficulties.

Discuss the many signs of low housepower and the dangers of overloading circuits.

Overheating and fire are the eventual results of overloading.

Symptoms of low housepower:

- flickering and dimming of lights when appliances are turned on
- appliances operating slowly or not as well as they should
- fuses blowing or circuit breakers tripping too frequently
- radios fade out or sound scratchy when appliances are turned on
- T.V. picture shrinks in size or "winces" when other appliances are turned on

Home hazards:

- multiple "octopus"

REFERENCE

MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS

SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES

SUPPLEMENTARY INFORMATION FOR TEACHERS

E. Miscellaneous home hazards

There are many potential hazards inside and around the home.

Have each child make a list of the potential hazards inside and around his home.

Film: "A glass door lesson for Charlie", State Health Department Film Library.

Discuss precautions to be used with a lawn mower.

Film: "A mowing lesson for Charlie", State Health Department Film Library.

connections used for several appliances at once

- long cords strung around rooms in order to connect lamp or appliances
- overheating of motors

Teachers should know the different types of glass, i.e.

- tempered - heat-treated, will break into little pieces
- plate - two pieces of glass separated by a thin sheet of transparent material - will not shatter (e.g. automobile windshield)
- regular - will cut sharply

Loose mower blades and debris can be dangerous missiles when mowing.

VI. School Safety

The most efficient way in any undertaking is usually the safest way.

The class could present a program on safety to the P.T.A.

Demonstrate the safe use of materials and facilities in the classroom.

REFERENCE

MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS

SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES

Film: "Safe living at school", Association Films, San Francisco.

- Teach good housekeeping - desks should be clean and uncluttered; coats in proper places; use of waste basket; proper procedure to erase chalkboards.
- Demonstrate how to handle pointed objects, glass, and tools.
- Discuss the reasons for staying away from radiators, electrical fixtures, playing on chairs.
- Demonstrate how to carry chairs, working materials, and other equipment safely. (Lift the chair by placing the hand where the legs join the back. Lift with the legs and keep the back straight)

Class discussion: What is the best way to treat animals?

SUPPLEMENTARY INFORMATION FOR TEACHERS

Animals in the classroom can be dangerous; for example, turtles can spread salmonella germs if children do not wash their hands after handling.

REFERENCE	MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS	SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES	SUPPLEMENTARY INFORMATION FOR TEACHERS
B. Corridors and stairs	Accidents frequently happen when stairs are not used properly.	Have the class demonstrate the proper procedures of using stairs.	
C. School grounds	Playgrounds are for fun and exercise.	<p>Have a demonstration on the proper procedures for swinging, gripping, etc.</p> <p>Film: "I'm no fool having fun", State Health Department Film Library.</p>	<p>Safety precautions for use of school grounds:</p> <ul style="list-style-type: none"> ● Swings are for swinging, not climbing, etc. ● Be sure area is clear of people before swinging. ● The swing should be stopped before a person gets off. ● Slides can be safe; only one person should be allowed to climb at a time and one person slide at a time. ● Only allow feet-first sliding and stress clearing the area at the bottom immediately. ● Climbing - A safe distance should be kept between climbers (a grip with the thumb around the bar and curve around opposite fingers where feasible; land with knees slightly bent and on balls of the feet, not the heels.) ● Teeter Boards - Partners should sit facing each

REFERENCE

MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS

SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES

SUPPLEMENTARY INFORMATION FOR TEACHERS

other; keep ankles and feet clear. Do not jump off. The leaving of a teeter board correctly needs cooperation. Avoid bumping as this causes injuries.

- Play only in designated area.
- Keep play area clean and safe.
- Care for smaller children.

A frequent accident that occurs during free play on the playground is collision with another person.

About 50% of school accidents happen on the playground. The teacher should supervise the pupils and inspect equipment constantly.

A playground patrol may be organized to assist the teacher.

Good sportsmanship can help to reduce accidents.

Demonstrate procedures for using equipment and apparatus. Have the class report all unsafe equipment.

Films: "Safety on the

REFERENCE

MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS

SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES

SUPPLEMENTARY INFORMATION FOR TEACHERS

D. Laboratory

Laboratory work is a serious activity which requires concentration and attention of all.

playground", "Play ball, play safe", State Health Department Film Library.

Ask pupils to note the hazardous areas in the laboratory.

Give a short quiz on safe laboratory practices.

Have all students:

- Work under supervision.
- Always use safety devices required (goggles, shields, etc.).
- Handle all materials with care.
- Report any accidents or broken equipment.

E. Auditorium

There are different regulations and laws for large group assemblies.

Conduct, with the aid of the school administrator, drills for evacuation of the auditorium.

Take the class to the stage area and show the "fireproof" curtain, hot lights, electrical apparatus, etc.

Stress these points:

- All students must maintain orderly conduct.
- Keep all aisles clear of feet, books, etc.
- Know where the fire exit is and know what to do in case of emergency; e.g. loss of power, fire, etc.
- All children remain seated until dismissed by groups. (crowding causes accidents)

F. Gymnasium

Proper attire and equipment in the gymnasium helps reduce accidents.

Adequate preparation before beginning gymnasium activity is a safety measure.

Let the class formulate a list of safety practices for the gymnasium. Perhaps the physical educator could visit the class and react to their list of safety practices.

The proper attire for gymnasium activities should be selected. Sneakers help prevent accidents. Make sure laces are properly tied.

REFERENCE

MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS

SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES

SUPPLEMENTARY INFORMATION FOR TEACHERS

Have a warm-up period, a period of instruction, demonstration and time to apply the principles learned.

Jewelry and pins should not be worn on the physical education attire. These can cause injury.

If glasses are worn, make sure they are safety glass.

Noise should be kept to a minimum so that directions can be heard.

Pupils should wait until directions are given before proceeding. Use safeguards - helmets, masks, gloves, mats - as indicated.

Leave enough room between relays, set the finish line at least 10 feet from a wall; use a line. Do not use walls for finish lines.

Supervise all the time. Emphasize that long fingernails can cause injury.

Do not allow gum chewing during any activity as it may cause choking or indirectly cause tongue injury.

Demonstrate safe practices in spotting, protective equipment, and the use of leaders.

Let the pupils survey the gymnasium, locker room, and shower room for safety hazards.

The gymnasium shower and locker room can be made safe.

REFERENCE	MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS	SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES	SUPPLEMENTARY INFORMATION FOR TEACHERS
VII. Outdoor Safety			
A. Winter sports			
1. ice skating	There are rules for safe skating.	<p>Film: "Ice rescue", American Red Cross, State Health Department Film Library.</p> <p>Discussion of safety rules for safe skating.</p>	<p>Suggested rules for safe skating are:</p> <ul style="list-style-type: none"> • Always be wary of ice-cracked areas. • Avoid danger zones - running water, open areas. • Never skate alone. • No speed skating in crowds. • Watch for open holes. • Skate in the daytime unless the area is sufficiently lighted. • Stop skating before you become too fatigued. • Wear adequate protection for sun and wind. • Be careful in the use of hockey sticks and pucks.
2. skiing (optional)	Skiing equipment should be of good quality and in good condition.	<p>Discuss skiing equipment.</p> <p>Film: "Ski sense", Aetna Life Insurance Company.</p>	<p>Ski length and binding should suit the skier.</p> <p>Release bindings reduce the severity of accidents and can be bought from a</p>

REFERENCE	MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS	SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES	SUPPLEMENTARY INFORMATION FOR TEACHERS
			local ski shop or sporting goods store.
			Ski poles should have leather hand straps and the top should be padded.
			Clothing should be wind-proof and moisture proof.
	Good physical condition is a must for skiing.		It is advisable that skiers have strengthening exercises, especially for the legs, several weeks before planning to do your first skiing.
			Ski instruction is essential to avoid accidents. Falling techniques should be included in the instructions.
			A novice skier has difficulty with control.
			The best area for skiing should have at least 6" of snow, free of rocks and stumps.
			Rules in general are: <ul style="list-style-type: none"> • Don't dally in the middle of the trail. • Give full cooperation to the ski patrols.
	Ski accidents are avoidable.	Discuss the general rules for safety on the slopes. Class discussion: Proper conduct on a ski tow.	

REFERENCE

MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS

SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES

SUPPLEMENTARY INFORMATION FOR TEACHERS

- Don't litter ski area with trash or rubbish.
- Fill in your own "sitz-marks".
- Allow ample time before following another skier.
- Never descend a slope side by side with another skier.
- Never ski alone.
- When leaving the designated trail, notify someone at the ski lodge.
- Observe all safety precautions of ski lifts and tows.

Cut out pictures of ski tows and lifts. Discuss the safety rules for these devices.

The rope tows have a twisting motion -- no loose clothing is allowed near the rope.

Accidents are frequent when getting off or on a T-bar. Careful procedures should be followed here.

The chair lift can reduce accidents but regulations must be followed.

Children are hurt hitching rides and sledding into the roadway. Sometimes overloading sleds and toboggans causes steering difficulty and accidents.

If the school permits it and if the area is available, the class could make a field trip to a sledding area.

Sledding and tobogganing are relatively safe sports.

3. Sledding and tobogganing

REFERENCE

MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS

4. Snowmobiling Adequate training should be provided before operating a snowmobile.

SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES

SUPPLEMENTARY INFORMATION FOR TEACHERS

The return to the top of the hill should be separate from the sledding area.

- Fastest growing winter activity for individual and family.
- Used also by Department of Agriculture for forestry duties, State Police and farm industry for transportation and rescue activity.

Hazards and precautions:

- Operator should have some pre-handling training (i.e., the proper way to lean into or out of a curve or uphill or stop progression.) to reduce incidence of upset of machine on top of operator.
- 18 to 20 inch tread lends the machine to great upset capabilities.
- Skin temperature drops markedly when exposed to 7-15 miles per hour wind at 30°-32° or below.

REFERENCE

MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS

SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES

SUPPLEMENTARY INFORMATION FOR TEACHERS

- Wear moisture proof and wind proof clothing. Jump-suit type gear has been developed for this sport.
- Face masks ensure warmth of ears and nose; heavy boots for warmth.
- Wear approved protective lenses or goggles and glasses to prevent eye damage by flying snow and/or foreign objects.
- Well laid out trails are important - free of stumps, vines, rocks.
- Type of machine with front bumper is helpful in preventing collision with stump or another machine.

B. Summer activities

1. baseball

Baseball is a relatively safe sport but it does involve risk, especially when safety equipment is not used.

Demonstrate safety equipment used in baseball; e.g. batting helmet, catching equipment, taped handles on bats, non-breakable sun glasses.

Ask some of the boys in class to tell about the different ways that Little League, etc., baseball is safer.

Baseball has a low accident record with few injury reports. Injuries involving players running into each other on the base paths and colliding catching a fly ball can be avoided.

REFERENCE	MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS	SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES	SUPPLEMENTARY INFORMATION FOR TEACHERS
		Film: "Play ball, play safe", State Health Department Film Library.	
		Discuss accidents involving players running into each other. How do ball players avoid collisions?	The batting helmet should be worn by all batters and catching equipment worn by all catchers.
			Spikes should not be worn by younger age groups but rubber cleated shoes or sneakers are recommended.
2. kite flying	Kite flying should be done in a safe area.	Have a "kite safety day". Have pupils bring in kites with safety slogans attached.	The local power and light company will provide material on kite flying. General good practices of kite flying are: <ul style="list-style-type: none">● Fly the kite in a large open area; avoid wires and trees.● Use strong twine of nylon or cotton; avoid wire.● Fly the kite away from traffic.● Fly kites in dry weather; rain makes the possibility of shock greater.
3. camping	Some campsites are more desirable and safer than others.	(School camping may be provided by some schools.)	Camp should be on high ground; mosquitoes frequent low areas.

REFERENCE	MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS	SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES	SUPPLEMENTARY INFORMATION FOR TEACHERS
		<p>Discussion:</p> <ul style="list-style-type: none"> ● woods courtesy - ask permission, etc. ● fire building - on rock or clear areas ● prevention of fire ● use of woods, tools - axe, knife, etc. ● keeping clean and safe - latrine, food supply, water ● weather - storms ● hiking, fishing - clothing, hooks, etc. 	<p>Check the water supply for purity; don't camp on the bank of a creek where there is danger of flash flood.</p> <p>Fire safety is essential at camp; light a fire only in a safe area - away from woods.</p> <p>Do not camp near a high tree in case lightning occurs.</p> <p>Check materials from your local office of Boys Souts of America, New York State Conservation Department, Red Cross, Bureau of Physical Education - State Education Department, 4H Clubs, etc.</p>
4. boating	You must know and abide by the accepted "traffic rules" of the water.		<p>Safety precautions:</p> <ul style="list-style-type: none"> ● Carry life preserver. ● Have proper lights and a fire extinguisher. ● Steer clear of smaller boats. ● Buoys are signposts in the water.
5. nature's hazards			

REFERENCE	MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS	SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES	SUPPLEMENTARY INFORMATION FOR TEACHERS
a. snakes	Some poisonous snakes are native to New York State.	<p>Discussion - poisonous snakes of the United States:</p> <ul style="list-style-type: none"> ● coral ● copperhead ● rattlesnake ● water moccasin 	<p>There are 31 varieties of rattlesnakes in the United States. The diamond back rattlesnake is the most dangerous in the United States. The venom is particularly potent. Signs of a poisonous snake bite are two small puncture wounds, bleeding, and discoloration at the wound.</p> <p>The copperhead is a chestnut brown color and is usually 3 to 4 feet in length.</p> <p>Snakes do not usually attack if they have a chance to escape. Snakes usually prowl during the night and live in rock piles or crevices and other stones. In snake country, wear high shoes and protective clothing. The fatality rate from poisonous snake bites is low. (probably around 15%)</p> <p>New York State Conservation Department Bulletin - "Snakes of New York State."</p>
b. poisonous plants	Some poisonous plants are easily identified.	Cut out pictures of poisonous plants.	<p>Poison ivy, poison sumac, and poison oak contain toxic material that consists of a resinous alkaloid. All have fruit that is greenish-</p>

REFERENCE

MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS

Poisoning from poisonous plants may be obtained in a variety of ways.

SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES

SUPPLEMENTARY INFORMATION FOR TEACHERS

white in color and look like smoked grapes.

There are probably 50 to 60 varieties of plants in the United States that cause irritation to the skin.

Pets may spread the poison. The smoke from burning poisonous plants may be responsible for the spread of the toxic substance.

Poison sumac is a swamp plant, while poison ivy is usually a vine with shiny green leaves that turn brilliant orange in the fall.

c. thunderstorms

Certain places should be avoided during a thunderstorm.

Have pupils make a poster of safe places during a thunderstorm.

Discussion question:

- Why is it not safe to be under a tree during a storm?
- Why is it not safe to be near a wire fence during a thunderstorm?

During a thunderstorm avoid open fields, lone tall trees, wire fences, especially around a swimming area or a high, exposed area.

Types of hazards:

- Tornadoes - violent rotary storms
- Hurricane - large rotating air, usually from sea
- Lightning

REFERENCE	MAJOR UNDERSTANDINGS AND FUNDAMENTAL CONCEPTS	SUGGESTED TEACHING AIDS AND LEARNING ACTIVITIES	SUPPLEMENTARY INFORMATION FOR TEACHERS
C. Agriculture			Safe places generally are: <ul style="list-style-type: none">● inside a house - storm cellar● in a car● under a cliff or ledge
	Of all accidents on farm land, one third involve machinery.		Tractors have a high center of gravity and can tip at certain angles.
	It's important to treat livestock properly.		Treating livestock properly includes: <ul style="list-style-type: none">● Milking procedure● Exercise
	Follow all rules when using insecticides.		Store insecticides away from small children.
			Fertilizers are generally not dangerous.

REGULATIONS
of the
Commissioner of Education
of the
State of New York

APPENDIX A

Section 153. Safety Education

Instruction in safety education, including highway and traffic safety, shall be given to all pupils in both elementary and secondary grades; such instruction shall be made a definite part of the school program either as a special subject or in connection with instruction in other subjects; comprehensive plans for safety education shall be organized by local school authorities including highway and traffic safety, home safety, recreational safety, industrial and occupational safety, and school safety, to insure the development of safety habits in all the varied activities of everyday life; and the instruction in safety education shall be given for not less than 30 periods, or the equivalent thereof, in each year in the elementary schools (grades 1 to 8), for not less than 30 periods, or the equivalent thereof, in each year in the junior high school (grades 7 to 9), and for not less than 15 periods, or the equivalent thereof, in each year of the senior high school (grades 10 to 12).
